Herfried,

Maybe it are our roots.

When you see the history of the country I am living in, it is always selling, selling (liberal) etc. done in centuries.

When you see Austria (the empire) it is always a little bit preservation (conservative).

Strange is of course when you see that, that by instance the major car engine developments is from Austria and one of our major industries is still flowers.

However when you see how flowers are made nowadays, than it surely has nothing to do with even 20 years ago.

Maybe Microsoft would just raise the price to an economic level to make it worthfull. The problem with software is that you get that price later, so there is a risc in that, if the users are for that price still that convertative.

Cor

Don't they have economic classes in that university of you?

Don't you have any counter-arguments at hand?

If there are two vendors selling programming languages/environments/libraries A and B and A provides new versions which are incompatible to their predecessor, it's often better (sure, there are many other factors to be considered) to use B if it stays compatible and

Re: Keep FoxPro Alive!

provides approximately the same feature set.
