Uri,

A dataview is dynamic, so when you have set the position by Rebeca to 1 etc. it will be showed in that way.

Hello folks

Can anyone help me with sorting for binding?
VS2005. VB.NET

I have a datagrid view where I display two columns – name of employees with their positions like

'John',1
'Rebecca',2
'Justin',3

As far as good. I have a data table and I perform filter by using data view object to select only "right" employees. So what if the user wants to change John's position to 3 then I need to sort the dataview (I think) with Rebecca =1, Justin =2, John=3 and later on update to the database. How can I do that?

Thanks
