I tried it already, and I was told that it is impossible to do, since 2007 remove some fonctionality that were the in previous version

I am stuck at the point of how do I keep the information, because now the only way is to keep it in memory, so as soon as I close the program I lose everything (which defate the purpose)

You could perhaps ask in a Access group about what you are missing in case it would be doable with Access...

If you are new check try

<http://msdn2.microsoft.com/en-us/beginner/default.aspx>

Else elaborate a bit about the exact problem (have you tried to create a form and add some simple code, or are you stuck at a particular step ?)

Hi,

I would like to create a program to keep track of all of DVD in my collection, but I do not know how I can do such a thing. I use to use Access to do this but Access 2007 refuse to use most of the forms that I need to get to the information.

SO I thought that using VB Express 2008 I could do something that would do what I need, but I have no clue where to start

Re: Help required

Thank You in Advance
Merci a l'avance

Martin

MS has a bunch of "Starter Kits" which includes a Movie Collection application. You could most likely take this as the starting point for your app.
