unfortunately no :(

Since I don't know what you want to do with those files I guess this is as  
far as I can take you.

LS– Hide quoted text –

– Show quoted text –

that's simple I just want to save them into GIF format, but I need a  
little help showing me how to extract photo data from that  
XMLSerialize document...  
hope that make sense...

From what I see there is only a rectangle. It seems to have the coordinates

of the upper left corner and bottom right corner, along with the width of the line to be drawn and various  
colour information. I would hope that the framework you are using has documentation for the various pieces.

What you would get is a rectangle which I think by itself is just that.

You have two tasks. First to extract the info and second to draw.

I suggest you read up on XML first. That will extract your info. Without knowing what the schema of the  
XML is I can't help much here but there is lots of docs on using XML in Dot.Net.

Re: can one convert drawable XmlSerializer xmlns file into GIF or PNG?

Re: can one convert drawable XmlSerializer xmlns file into GIF or PNG?

Then you need to investigate the drawing classes. If all you are doing is drawing rectangles that is fairly simple.

LS
