Hello friends, I have a simple question.

If I have an application with several forms, you see on the windows bar, usually on the bottom of your screen, the various tags for the various forms.

Now if the bar gets crowded, windows automatically puts all the minimized forms of the same application together, and indicates how many of them are collapsed in that tag.

For instance: "10 vshost.exe".

Now my question. How do I tell in VB.net my application to force showing all the minimized forms in that way, I mean collapsed in 1 tag only.

I want to do programmatically that action, which windows does automatically when the bar is too crowded.

For Each f As Form In My.Application.OpenForms

' ... how ??

Next f

-P
