Hi All

Is it possible with the Microsoft Scripting Runtime library to get a collection of all the files in a folder that match a regular expression?

That is, can I make a call through the FileSystemObject or a Folder object to get just the files that start with the letter 'A' for example?

The only API I can see is Folder.Files which gives *all* the files then I would have to sort through and do the pattern matching myself which seems like it will be very slow. Any ideas?

Thanks in advance,
Chrisso
