I have windows form with datagrid control.
I don't want the datagrid control to display vertical and horizontal scrollbars.

I wonder whether there is a way to get rid of scrollbars without deriving my own class from System::Windows::Forms::DataGrid?

The problem is that unless I derive my own class from DataGrid I don't have access to scroll bar objects. The HorizScrollBar and VertScrollBar properties of VertScrollBar are protected!

Can anyone recommend alternative way to get rid of scrollbars?

Thanks

.
