|
| Looks to me like it's dead in the water. No hint of a release date. The
| dreadful version accidently included in beta 2 pointed to some serious
| issues. Tis a pity because C++ is next to useless without it's standard
| library.

|
|

This has nothing to do with STL and C++, it's about STL/CLR and C++/CLI.

Willy.

Sorry Willy I'll rephrase. Tis a pity because because C++/CLI is next to useless without the ability to use managed types with the standard library.
