Hi Geogre,

Thank you posting!

Is there a brief tutorial somewhere on how to use the VC8 linker to generate a manifest for an isolated application with a dependency section for an arbitrary dll?

I am afraid the VC8 linker doesn't provide such function to generate an application manifest, you need to manually create the specific application manifest by yourself.

By the way, an application manifest only works for several specific Microsoft Side-by-side Assemblies, the kernel32.dll is not a side-by-side assembly, so an application manifest would not work in this case. Please refer to the following MSDN documentation:

Supported Microsoft Side-by-side Assemblies  
[http://msdn.microsoft.com/library/default.asp?url=/library/en-us/sbscs/setup/supported\\_microsoft\\_side\\_by\\_side\\_assemblies.asp](http://msdn.microsoft.com/library/default.asp?url=/library/en-us/sbscs/setup/supported_microsoft_side_by_side_assemblies.asp)

By the way, I noticed you have posted a related question in our platformsdk.security, my colleague Jeffery have also provided a detailed reply to you in that thread, please check it there.

Thanks!

Best regards,

Gary Chang
