I want to embed a motorola s file in my exe file using Visual C++.net, and then I can use the data in the Motorola file. How should I do?

You have already gotten two replies in

[microsoft.public.vc.language](mailto:microsoft.public.vc.language)

including one from yours truly. It is always best to cross post (mention multiple groups in a single post) than to multipost (mention a single group in multiple posts)

I am urgently need your help.

Everyone's request is urgent to him. :-)

Thanks a lot.

You are welcome.

Regards,  
Will
