Hello,

We developed a VS2008 application using the COM WebBrowser. When we execute the app, and try to open a web page that has <Form Action = .. method = get>, instead of the Form being displayed in the App, IE 7 (64-bit) opens up and displays the Form inside a tabbed window.

When we execute the program on a Win 32 platform, the application displays the Form in the application, and not in IE 7.

IE 7 Win32 version # 7.0.5730.11
IE 7 Win x64 version # 7.0.5730.13

How do we prevent IE 7 (64-bit) from hijacking our application?

Thanks,

-jc
