Hi

I am just starting to learn how to use microsoft visual j#, and I wonder if anyone could help me with this problem, I am trying to display a number stored in a variable into a message Box.show but I keep getting the Error below:

Error 1 Cannot find method 'Show(int)' in 'System.Windows.Forms.MessageBox' C:\Documents and Settings\Keith\Local Settings\Application Data\Temporary Projects\WindowsApplication1\Form1.jsl 84 3 WindowsApplication1

The code I am writing is:

```
private void button1_Click(Object sender, System.EventArgs e)
{
int x = 6;
x = 6;
MessageBox.Show(x);

}
}
```

Could someone please help me with this?

Thanks

Keith
