The System.Xml.Xsl.XsltTransform class does not support VBScript as a scripting language in script blocks. Only C#, VB and Jscript are supported.

>From the MSDN documentation at

<http://msdn.microsoft.com/library/en-us/cpguide/html/cpconXSLTStylesheetScriptingUsingMsxslscript.asp>

"The language attribute is not mandatory, but if specified, its value must be one of the following: C#, VB, JScript, JavaScript, VisualBasic, or CSharp. If not specified, the language defaults to JScript. The language-name is not case-sensitive so 'JavaScript' and 'javascript' are equivalent."

> The Access development group here at this company has exported its reports in xml format from Access 2003. I have no influence on how they have created them. I received the following files:

>

> xml

> xsd

> xslt

> asp or html (my option)

>

> Using a simple ASP.NET form with only a System.Web.UI.WebControls.Xml on it, I receive an error (below) that the scripting language 'vbscript' is not supported. The xslt file has in it vbscript scripting to generally calculate certain amounts in the report. I have not been able to find any help info on working around this. Running the supplied asp or html file the report is displayed however that means a web page outside of my C# .NET code. Can anyone help me on this?
