C# windows service freezes on System.Diagnostics.Process.Start(info)

When I launch PSCP from a C# windows service and launch pscp 0.53 there are no issues. but when I use C# windows service to launch pscp 0.58 C# freezes in System.Diagnostics.Process.Start(info)? pscp 0.58 works fine at command line, but causes C# to freeze on System.Diagnostics.Process.Start(info) also i noticed that the pscp process does not show in task manager while System.Diagnostics.Process.Start(info) is hanging. Regardless of the implementation of PSCP, how can System.Diagnostics.Process.Start(info) ever freeze while the target exe is not loaded in task manager?
