Which version of xsd.exe are you using? When I generate a schema from a bit of XML (although I typically leave out the <?xml?> part), I get:
// This source code was auto-generated by xsd, Version=1.1.4322.2032.

```
[System.Xml.Serialization.XmlRootAttribute(Namespace="", IsNullable=false)]
```

Hey there,

Just starting out messing with XML in .NET. I'm just trying to read some simple XML that I'm using to pass data structures between programs. Something like this:

```
<?xml version="1.0" encoding="utf-8"?>  
<Chris>  
<One>1</One>  
<Two>2</Two>  
</Chris>
```

So I create the above in a file, create a matching XSD in Visual Studio, and use a FileStream and XmlSerializer to try and read the thing in. I always get an error at (2,2) unless I make the 2nd line look like this:

```
<Chris xmlns="http://tempuri.org/Chris.xsd>
```

I'm presuming that it doesn't want to parse it because it's trying to match this line in my auto-generated .CS file:

```
[System.Xml.Serialization.XmlRootAttribute(Namespace="http://tempuri.org/Chris.xsd, IsNullable=false)]
```

Do I have to have this xmlns deal in that line or what?

Thanks!
