Here's what Barb was looking for:

<http://peltiertech.com/Excel/ChartsHowTo/ClusterStack.html>

It provides a few links to sites with good descriptions of clustered/stacked columns. Your first column position in the chart has only one series in the stack, the second has two.

Check out Jon Peltier's site at www.peltiertech.com

I know he has something there on this, but I don't have time to look it up right now.

I would like to chart three series. I would like two columns in each group. The first column in a group would be series 1. The second column in a group would be series 2 and 3 stacked on each

Re: Column Charts – stacked and grouped

other. Is that possible? I've come close by using secondary axis but the columns are plotted over each other.
