Dear Aladdin

I have had another look at selecting the various specification items via check boxes, and the best way to go about this is by using user-forms. The down side to this is the fact that there will be a certain amount of coding that will need to be done in order to get the form working in conjunction with the contractors works order. But by no means impossible. If you do not feel confident in doing it yourself, I am sure that there are a number of IT contractors in your area who would be willing to help.

Another alternative, and possibly not viable for you, is to use a database solution such as MS Access, as this would provide a bit more flexibility in your design.

Kind regards

Paul Falla
