I have recently been given an added responsibility at work that requires me to prepare a schedule for a staff of 10, some part time, some full. I have been racking my brain for a month and trying every trick or formula I could to develop a monthly calendar with set shifts (5/day) for unchanging employees that would calculate hours for each employee by week and by month. I would like to be able to program something for example:

Gary works Tues-Sat 6:30AM-3:00PM, with a 30 minute lunch. The lunch period does not need to be shown on the calendar since this would ideally be a hidden formula only necessary for calculation but not required to be visible on the staff schedule I post. Janie works Sunday through Thursday 11AM-7:30PM..... and so on.

Can someone give me some direction please? see example of what want visually, please note the absence of hour totals.
