Suddenly, I'm getting the error message when trying to open up my Excel program (from MS Office 97 professional edition), "A required .DLL file, MSO97.DLL, was not found." What does this mean, and how can I resolve this? I was just using excel the other day! I did install McAfee Virus Scan yesterday ... could this have destroyed something? But I did reinstall, so that should have replaced any missing files, right?

I tried restarting the computer – nothing. I tried reinstalling MS Office 97 – nothing. Help!!!
