Hi GrayesGhost

I hope this will help you.

```
Sub Retrieve_Info
```

```
P = "C:\MyDocumnets"
```

```
f = "Test.xls"
```

```
s = "Sheet1"
```

```
Application.ScreenUpdating = False
```

```
For r = 1 To 100
```

```
For c = 1 To 4
```

```
a = Cells(r, c).Address
```

```
Cells(r, c) = GetValue(P, f, s, a)
```

```
Next c
```

```
Next r
```

```
Application.ScreenUpdating = True
```

```
End Sub
```

```
Private Function GetValue(path, file, sheet, ref)
```

```
' Retrieves a value from a closed workbook
```

```
Dim arg As String
```

```
' Make sure the file exists
```

```
If Right(path, 1) <> "\" Then path = path & "\"
```

```
If Dir(path & file) = "" Then
```

```
Exit Function
```

```
End If
```

```
' Create the argument
```

```
arg = "" & path & "[" & file & "]" & sheet & "!" & _
```

```
Range(ref).Range("A1").Address(, , xlR1C1)
```

```
' Execute an XLM macro
```

```
GetValue = ExecuteExcel4Macro(arg)
```

```
End Function
```

RE: Importing unopened worksheet into an open Workbook

Thanks
Bob
