I am having a problem with adding a column of time values.

Column e has the time called out and is formatted as Time 13:00.

Column f has the time in and is formatted as Time 13:00.

Column g adds the total time which has a formula of –
=if(f10>e10,f10-e10,1-(e10-f10))

Then I have Column g adding up to give me a total of time. It is formatted as Number. The formula is g=sum(g8:g26)*24

This all works great as long as there is actual time entered. However when the cells in e & f as blank it still enters a total as it is taking it as 0:00 which it is counting it as 24:00.

Can anyone tell me how to get around this problem? I would like to display the total as 0 if there are no times entered. My spread sheet has 20 rows in which I can enter information if needed otherwise they sit blank....

Thanks
