The initial cursor position is the position of the cursor when you save (latest) the file.

You can press Ctrl+{End} to put the cursor to the last cell either before you save or after you open the file.

Best regards,

Yongjun CHEN

When I open a frequently updated sheet the cursor always jumps to row 3442, column A.

Any ideas how I can get the behaviour back to normal and jump to the last cell used when the file was closed?
