Try this to get you started it assumes that column "A" is where your account name is...you'll need to tell us what the sales rep column is to code the sort.

```
Sub MyDelete()  
Dim EndCell, MyRange As Range  
Set MyRange = Range("A1", Cells(Rows.Count, "A").End(xlUp).Address)  
Set EndCell = Range(Cells(1, 1), Cells(Rows.Count, "A").End(xlUp))  
For i = EndCell.Count To 1 Step -1  
If Cells(i, 1).Value = "Sales" Or Cells(i, 1).Value = "Sales Tax"  
Then  
Cells(i, 1).EntireRow.Delete  
End If  
Next i  
End Sub  
Sandy
```

Mark,  
This was very well written BUT  
You knew there was a but coming, right? :O>  
In a new posting, copy this well written request but add an example of what  
your data looks like coming out of Peachtree and what you want it to look  
like.  
Sincerely,

Greetings all:

Re: macro to delete lines based on a value

I have a spreadsheet that varies in length. It is sorted by account name. There are three different account names (Sales, Sales Tax & Net Amount). Each sale that our sales-reps create during the month generates three lines in this spreadsheet when I export it from our accounting package (peachtree) into excel (I am using Excel 2003).

This is my question:

Can I create a macro that will delete all lines that contain the account name of Sales Tax or Sales just leaving the lines that has the account name of Net Amount? I would then also like to sort the results by sales rep name.

Is this possible?

Any help on this would be greatly appreciated. I run this program a number of times during the week, and the sort routine is getting quite old – there has to be a better way to perform this routine. I would create a macro to record my keystrokes, but again, the number of lines of each account varies during the month.

Thanks again!

Mark
