You will see nothing when you "unregister" Excel.

When you re-register let the Office Installer do its thing.

Also, check the "Open" Command line in Folder Options>File Types and make sure there are double quotes surrounding the path.

"C:\PROGRAM FILES\MICROSOFT OFFICE\OFFICE\EXCEL.EXE" /e

Gord:

when i tried to re-register excel, i followed your instructions. When i did the 'unreg' part, nothing appeared to happen. When i did the re-reg part, the office installer started up. Should I see anything happen when i unregister excel?

i fixed it. i added </e "%1"> to the end of the command line and deleted what was in the DDE box. it worked. we'll see if it lasts. this

Re: Application opens but the file does not?

is my
office computer, so i'll find out more on monday...i'm out!

have a good weekend, Gord.

Try re-registering Excel.....

Close Excel first and On the Windows
Taskbar

1) Start>Run "excel.exe /unregserver"(no
quotes)>OK.

2) Start>Run "excel.exe /regserver"(no
quotes)>OK.

See the space between exe and /regserver

You might have to designate a full path to
excel.exe.

In that case Start>Run "
