You haven't made it clear what you want.

Perhaps one of the following? [I have included parentheses to make it clear to you what the priority of the arithmetic operations will be, but in some cases the parentheses can be omitted because of the defined precedence of the operators.]

$=A1-(B1*4\%)$
 $=(A1-B1)*4\%$
 $=A1-(B1+(B1*4\%))$ or $=A1-(B1*(1+4\%))$
 $=(A1-B1)*(1+4\%)$
