Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

in
Excel.

I
want
to
implement
a
button
in
EXCEL.
Such
that
when
the
user
clicks
on
it,
it
will
go
to
Access
get
that
Table
and
then
paste
it
in
the
current
workbook.

Then
when
it's
pasted
in
Excel
(there
are
about
10
Categories),

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

I
want
the
categories
to
be
sorted
using
the
category
called
"Invested".
So
Basically,
only
show
me
columns
for
"Invested."

Is
there
anyway
this
can
be
done
in
Excel?

I
greatly
appreciate
your
efforts,
guys!

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

I greatly
appreciate
your
assistance,
Ron, but the
code is still
not
working.

I
downloaded
and made
some
changes to
your code,
but it's still
not
working. I
get an error
message
that says:
"error
copying
data." I
don't know
why I'm
getting this
error. It
seems your
example has
the
table name
as just one
word
("Orders"),
while my
table has
two words
("Invested
Related").
Also my
access path
has three
words.

Also you
have ur path

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

```
as:  
GetDataFromAccess  
ThisWorkbook.Path  
& "  
OrderDatabase.mdb",  
"Orders", _
```

I changed
this code to
my
path..something
like:

```
GetDataFromAccess  
ThisWorkbook.Path  
&  
"/Invested  
Related.mdb",  
"Invested  
Securities",  
_
```

OR

```
GetDataFromAccess  
ThisWorkbook.Path  
&  
"C:xxx/xxx/xxx/  
OrderDatabase.mdb",  
"Invested  
Securities",  
_
```

OR

```
GetDataFromAccess  
ThisWorkbook.Path  
&  
"C:xxx\xxx\xxx
```

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

```
\OrderDatabase.mdb",  
"Invested  
Securities",
```

–

Any
difference
in having \
or /?

It seems
like the path
code is not
working
well.

Thanks for
your help!–

Ron, on my access table the
name of my categories are
two letter words
like "invested securities" or
"Cusip Number"...etc. I see
that yours
is merged together like
"OrderNumber" "ShipVia"
"ShipCountry"...etc.
Does that make a
difference? This categories
in Access is shown as two
or three-letter words.

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

My Access File Name is
"invested securities.mdb"
while yours is
"OrderDatabase.mdb" So
everytime I saw the
"OrderDatabase.mdb" I
changed it to "invested
securities.mdb. I tried
merging it, but still
no luck.

My Access Table Name is
"invested companies" while
yours is "Orders"
So everytime I saw "Order",
I changed it to "invested
companies" I
tried merging this as well to
fit yours, but still no luck.

Now is the space betwee all
these two or three-letter
words a problem?
Because I entered the path
code just as you suggested,
but still no
luck.

I apologize for bothering
you so often, but I do
appreciate your
patience and assistance.

Thanks!– Hide quoted text

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

Unfortunately I can't send the database Ron because it's work-related/sensitive. I wish it was not work-related so i can get this code working properly for me.

Does it matter that I'm using Excel 2003? I have no idea why this thing is not working because I simply pasted your code as is, and just changed access file path, access name, table name, access column names...etc.

I know I'm probably making a minor error somewhere, but since I'm clueless about Macro..., what can I say.

Any other way you can assist will be greatly appreciated.

Thanks!– Hide quoted text –

Here goes the codes, I hope it helps. I inserted those modules manually – (Right-clicked on Project name – Insert – Module).

Thanks a great deal, Ron.

MODULE 1:

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

```
Sub TestGetData()  
With Sheets("Criteria")  
Sheets("Sheet1").Range("A7:H7").Value =  
.Cells(ActiveCell.Row,  
1).Range("A1:H1").Value
```

```
GetDataFromAccess "R:\SM\Undecided\Page Me\index me  
v2.mdb",  
"Sample Table", _  
"Firm Name", "=", .Cells(ActiveCell.Row,  
"B").Value, _  
"Status", "=", .Cells(ActiveCell.Row,  
"C").Value, _  
"Game Firm Contact",  
"=", .Cells(ActiveCell.Row, "D").Value, _  
"Funds Impacted",  
">=", .Cells(ActiveCell.Row, "E").Value, _  
"Funds Impacted",  
"<=", .Cells(ActiveCell.Row, "F").Value, _  
"Start Date", ">=", .Cells(ActiveCell.Row,  
"G").Value, _  
"Start Date", "<=", .Cells(ActiveCell.Row,  
"H").Value, _  
Sheets("Sheet1").Range("A10"), "*", True,  
True
```

```
End With  
End Sub
```

```
Sub GoToCriteriaSheet()  
Sheets("Criteria").Select  
End Sub
```

MODULE 2:

'Look in the Examples module how you can call this macro

```
Public Sub  
GetDataFromAccess(MyDatabaseFilePathAndName As
```

Re: Import Access Table into Excel. I appreciate your assistance. Thanks!

```
String,  
MyTable As String, _  
MyTableField1 As String, S1 As String,  
MyFieldValue1 As String, _  
MyTableField2 As String, S2 As
```

...

If you are asking whether I enter an password when accessing the Access Table, the answer is no. But then again maybe I'm too dumb to know. What happens if it's in fact protected, but I can't see it.

.
