I really need to make a calculator out of excel to calculate a percentage"""" example
cell a1 = 19/09/2008 bought in
cell a2 = 21/06/2011 Shelf life
this is the example info, I now need to find out the percentage of time remaining in date? ie calculate the total amount of days in stock minus the days that have already passed since bought in (todays date) and show one result as a percentage and one as days remaining.

Any help would be most appreciated.
