Mark

Put it in a standard code module and assign the macro to a command button by selecting one from the forms toolbar, right clicking and selecting 'Assign macro'. The way you have it set up currently it is in the 'ThisWorkbook' class module and will run by the Open event (Each time the workbook is first opened)

For explanation of the different modules, check here

<http://www.nickhodge.co.uk/vba/vbaimplement.htm>
