Hi,

I have several reports that export into .xls spreadsheets from SAP. They always export with multiple header lines which makes it hard to sort because doing 'Data>Sort>w/ Header' only keeps the top line as header. I need to keep them all for my boss.

I have been doing them manually but the 2 new ones he gave me this morning contain 37,000 rows each.

Is there a way to sort all and have the first 6 rows be an exception?

Any help is appreciated.

Thanks,

Nikki
