```
Hi Jeff,
for example:
Function FixApostrophy(ByVal sSQL As String) As String
Dim sPhrase As String, wLength As Integer, m As Integer
wLength = Len(sSQL)
For m = 1 To wLength
If Mid(sSQL, m, 1) = "'" Then
sPhrase = sPhrase & "'"
Else
sPhrase = sPhrase & Mid(sSQL, m, 1)
End If
Next
FixApostrophy = sPhrase
End Function
```
