Thanks but there are no missing references; other than perhaps the "MS ADO Ext.2.7 for DLL and Security" which is automatically updated to "MS ADO Ext.2.8 for DLL and Security" when the Add-in is manually opened in the VB IDE [Alt-F11]. Once that reference is replaced the Add-in works for ADO 2.8. Then, of course, the Add-in will not work at all for ADO 2.7 {since "MS ADO Ext.2.8 for DLL and Security" is truly missing. VB IDE won't automatically downgrade to 2.7}.
