

Include headers/footers when saving as HTML?

I am using Office 2003 on Windows XP.

Saving an XL file as an HTML works great – the only thing is, it doesn't include the headers and footers in the spreadsheet.

Does anyone know how to include them when a file is "saved-as" an HTML? Or is there an alternative solution other than "save-as" (within Excel)?

I need a VBA or VB-script solution. Can someone please post some example code or otherwise enlighten me? Thanks much in advance for your assistance.
