THANKS TOM!

your explanation was very clear and the coding works to some extent, but I see there is a lot of debugging to do. I still don't get the results i was looking for. To making it more clear, let me illustrate what I have and what I want to have.

I have a bunch of account numbers i.e:

1-11111  
2-22222  
3-33333  
4-44444

When copying the information (personnel) from the other worksheet and pasting it next to rngitem, I want it to look like this:

1-11111 Apples  
Bananas[INDENT]  
[INDENT]Oranges  
2-22222 N/A  
3-33333 Heaven  
Hell  
4-44444 Nate  
Rob  
Allan

This is why I want it to shift the entire row. Is this clearer? The results that I'm getting are not totally what I'm looking for, but I'm trying to work from there. Any ideas on how to fix up the code? Thanks in advance.
