I appreciate ya'lls help. Let me explain a little deeper so I will know where to put this formula. I dont want to mess up my spread sheet, i am kinds new to formulas.

I am doing a preadsheet for my gas mileage.

I have a column with the gallons used, i'll call that cell B-215

I have a column with the Price per gallon, cell F-215

In cell G-215 i wrote a formula that goes like this =B215*F215

That formula multiplies the cells and gives me the dollar amount, but i also would like it to round it off up or down to the nearest nickle.

Can i have the round formula with my multiplying formula or do i need to use another cell for a formula. I hope this makes since,,and i do appreciate the help.....Tom
