Hi Tom,

Yes, I did mean his original post. Seems we posted identical replies simultaneously.

I thought you were referring to the "Select Case" omission, but I see I also made the same error in my "Then" statement. "Target = Date" s/b "Target.Value = Date". As a point of interest, I tested it the same way as posted. It worked just fine, but I confess it was rather bad form on my part. Usually I'm quite explicit in my code.

Regards,
GS

"Tom Ogilvy" wrote:

just an added thought.

Unless by replace Jim's code you mean his original post in the original thread rather than his post in this thread which seems almost identical to yours.

```
Private Sub Worksheet_BeforeDoubleClick(ByVal Target As Range, Cancel As Boolean)
Cancel = True
If Target.Row = 1 Then
Target.Value = Date
Else
Select Case Target.Value
Case Empty
Target.Value = "x"
Case "x"
Target.Value = "xx"
Case "xx"
Target.Value = 15
Case 15
Target.Value = "I'm calling your mom"
End Select
```

Re: Two double click events?

End If
End Sub

Thanks for noticing, Tom!
I didn't remove it, ..I stopped typing to copy/paste so I guess I omitted
it. There is no significance or merit in removing it!

Regards,
GS

"Tom Ogilvy" wrote:

Why. I don't see any merit in removing VALUE. What is the
significance.

Hi,

Revise Jim's code as follows:

```
Private Sub  
Worksheet_BeforeDoubleClick(ByVal  
Target As Range, Cancel
```

As

```
Boolean)
```

```
Cancel = True  
If Target.Row = 1 Then  
Target = Date  
Else  
Select Case Target  
Case Empty
```

Re: Two double click events?

```
Target.Value = "x"  
Case "x"  
Target.Value = "xx"  
Case "xx"  
Target.Value = 15  
End Select  
End If
```

End Sub

Regards,
GS

Hi...

I have been given some
advice to use a double click
event to change

my

cells

contents which works
brilliantly.

Is there a way to get another
double click event to work
for some

specific

cells in the same sheet's
code? Such as the inserting
the day's date

into a

cell in the top row when I
double click? ... Whilst
ensuring the

remaining

cells do another double click
event??

Thanks.
