Hi,

I almost have a program running for excel. I am trying to call multiple macros from "ThisWorkbook". The code below is supposed to delete the current QueryTable and then after the QueryTable is deleted I call a macro to add the new data. It currently does work for one sheet/QueryTable/Macro. But I am not sure how to do this for multiple sheets/QueryTables/Macros ?

MY QUESTION IS HOW DO I DELETE QUERYTABLES AND CALL MULTIPLE MACROS FROM THE \"WORKBOOK\_OPEN\" FUNCTION?

IF IT IS NOT POSSIBLE, IS THERE ANOTHER WAY TO DO THIS?

```
Private Sub Workbook_Open()

With Worksheets("Sheet1_RawData")

..QueryTables(1).ResultRange.ClearContents

End With

With Worksheets("Sheet1_RawData")

..QueryTables(1).Delete

End With

Dim qt As QueryTable

For Each qt In Sheets("Sheet1_RawData").QueryTables
'Clear QT data
qt.ResultRange.ClearContents
```

call multiple macros in workbook\_open?

'Delete QT named range from workbook

Sheets("Sheet1\_RawData").qt(1).Delete

'Delete query table

qt.Delete

Next qt

'Call macro to run new query

Call URL\_Sheet1\_Query

End Sub
