Hello Greg,

I know some civil engineering lab companies in Mexico, I actually live in Toronto and may get to know some of them (as I'm a civil engineer, I may know the field). So why don't you tell me more about this software of yours and let's see if it could be marketed.

One concern about marketing this kind of software is that VBA lacks of a good security password, but there are some solutions around that could help using hardlocks, or something like that; I'm currently investigating on that and posting here some questions about the subject to hear about their suitability.

Best regards
