This is how I edited it:

```
Sub test()
Dim Counter As Integer
For Counter = Cells(Rows.Count, "A").End(xlUp) To 1 Step -1
If Cells(Counter, 1) = 1 Then
Cells(Counter, 1).EntireRow.Insert
Cells(Counter, 1).FormulaR1C1 = "Record Type"
Cells(Counter, 2).Value = "Process Date/Time"
Cells(Counter, 3).Value = "Customer Number"
Cells(Counter, 4).Value = "Customer Name"
Cells(Counter, 5).Value = "Enrollment Type"
Cells(Counter, 6).Value = "Filler"

ElseIf Cells(Counter, 1) = 2 Then
Cells(Counter, 1).EntireRow.Insert
Cells(Counter, 1).FormulaR1C1 = "Record Type"
Cells(Counter, 2).Value = "Process Date/Time"
Cells(Counter, 3).Value = "Customer Number"
Cells(Counter, 4).Value = "Customer Name"
Cells(Counter, 5).Value = "Enrollment Type"
Cells(Counter, 6).Value = "Filler"
End If
Next Counter
End Sub
```

The values would be different in 02 in reality but I just wanted to get it working first.

MaryLindh...@xxxxxxxxxx wrote:

well, actually i cheated and copied it a second time for anything that had an 02

and that is the part that didn't put a header over any row that had an

02 it just did it once.

Re: Macro to insert headers..need coding help

In my trials this code inserted a row(in the active sheet) above each cell that had a "01" in column "A". It then placed the required headers in each column in each inserted row. What did it do when it was run? Are you looking to do this on one sheet or the whole workbook? MaryLindholm@xxxxxxxxx wrote:

Thank you for that. But this only seems to take care of if there is 1 row that starts with 01...I have various ones through out the file. Do I need to put a loop command in? Sandy wrote:

Try running this code on a spare sheet(copy your original for testing purposes). I think this is what you were looking to accomplish:

```
Sub test()  
Dim Counter As Integer  
For Counter = Cells(Rows.Count,  
"A").End(xlUp) To 1 Step -1  
If Cells(Counter, 1) = 1 Then  
Cells(Counter, 1).EntireRow.Insert  
Cells(Counter, 1).FormulaR1C1 = "Record  
Type"  
Cells(Counter, 2).Value = "Process  
Date/Time"  
Cells(Counter, 3).Value = "Customer  
Number"  
Cells(Counter, 4).Value = "Customer Name"  
Cells(Counter, 5).Value = "Enrollment  
Type"  
Cells(Counter, 6).Value = "Filler"  
End If  
Next Counter  
End Sub
```

Hi. I have some very large spread sheets that I need to insert headers into. I figure I can do an If...then statement but I'm not getting it to work. Here is what I have:

Re: Macro to insert headers..need coding help

```
Sub Headers()  
  
Dim Counter As Double  
  
Counter = 1  
  
If Cells(Counter, 1) = "01"  
Then  
  
Cells.Insert shift:=xlDown  
  
'do the splitting here, like  
Cells(Counter,  
1).FormulaR1C1 = "Record  
Type"  
Cells(Counter,  
2).FormulaR1C1 = "Process  
Date/Time"  
Cells(Counter,  
3).FormulaR1C1 =  
"Customer Number"  
Cells(Counter,  
4).FormulaR1C1 =  
"Customer Name"  
Cells(Counter,  
5).FormulaR1C1 =  
"Enrollment Type"  
Cells(Counter,  
6).FormulaR1C1 = "Filler"  
  
End If  
'Increment the Counter By 1  
Counter = Counter + 1  
End Sub
```

So every time the first cell has an 01 in it I want to insert a row that has the header titles in it. However, when I run this macro nothing happens. I'm not sure what I am missing. Can you help?
