I am trying to pull a SaveAs dialog box from a VB command that will prompt the user to save their work. The problem is when the user types in the filename it does not save as an excel file. The user would have to type the extension themselves and that is not feasible for this application. Below is the code I got from VB Help. Is there another way?

```
sub savenew()  
Set NewBook = Workbooks.Add  
Do  
fName = Application.GetSaveAsFilename  
Loop Until fName <> False  
NewBook.SaveAs Filename:=fName  
end sub
```

.
