Hi

I have three messages that come up on the Application Status Bar for a few seconds each & then move on to the next one in a loop. They start when the sheet is opened up & i want them to close when the sheet closes down. The problem i have with my current code is that when i try to close the sheet down it automatically reopens the sheet to carry on playing the loop of messages! I have tried using all sorts of things that should fire macros before i close the sheet but to no avail.

can someone tell me where i am going wrong, the PrivateSubWorkbook's just dont seem to want to interrupt my rather primitive loop?

here are all the PrivateSubWorkbook's that ive use to try to control the loop with:

Private Sub Workbook_Open()
Application.StatusBar = "Text in here"
Application.OnTime Now + TimeSerial(0, 0, 5), "LineB"
End Sub

Private Sub Workbook_Deactivate()
Application.StatusBar = False
End Sub

Private Sub Workbook_BeforeClose(Cancel As Boolean)
Application.StatusBar = False
End Sub

Private Sub Workbook_WindowDeactivate(ByVal Wn As Window)
Application.StatusBar = False
End Sub

Application Status Bar circular

....& here is the loop of messages...

```
Sub LineA()  
Application.StatusBar = "Text in here "  
Application.OnTime Now + TimeSerial(0, 0, 5), "LineB"  
End Sub
```

```
Sub LineB()  
Application.StatusBar = "More text in here"  
Application.OnTime Now + TimeSerial(0, 0, 5), "LineC"  
End Sub
```

```
Sub LineC()  
Application.StatusBar = "Even more text in here"  
Application.OnTime Now + TimeSerial(0, 0, 5), "LineA"  
End Sub
```

as always, any help gratefully recieved, let me know if you need more info

cheers

jb
