Glad you found it.

Google knows everything!

No question, just an FYI

I personally was looking for a short, simple code to reset all of my checkboxes I created with the control toolbar with the touch of one button. I found code with reference to sort objects posted by Dave Peterson. After a quick touch up of his original code, I came up with this code and it works perfectly!

```
Private Sub CommandButtonRESETform_Click()  
Dim Ctrl As OLEObject  
Dim SH As Worksheet
```

```
Set SH = Worksheets("Sheet1") '<<===== CHANGE
```

```
For Each Ctrl In SH.OLEObjects  
With Ctrl  
If TypeOf .Object Is MSForms.CheckBox Then ' searches  
for all checkboxes  
.Object.Value = False  
' "unchecks" each checkbox  
End If  
End With  
Next Ctrl
```

```
End Sub
```

Thank you Dave for saving me from unchecking over 100 checkboxes to clean a sheet!

Kat
