Maybe...

```
Option Explicit
Private Sub UserForm_Initialize()
dim myArr as Variant
'some test data
myArr = worksheets("sheet999").range("a1:A10").value
'assign the array directly to the list.
Me.ComboBox1.List = myArr
End Sub
```

Mike H. wrote:

I want to set the rowSource Property (The list of the combo box that pops up when you click the pulldown) to an array that is already built. I try to type the name of the array in the box but it doesn't allow that. What am I missing here?

Also, how would the array be set up so that the titles of the columns of data have a heading?
