Thank you,

The Exit sub as suggested by Mike and Stefi fixed the problem.

First there is an error someplace else in the code. That is why the debug error message is showing up. I would recommend finding and fixing this problem.

You can add On Error

On Error GoTo line

On Error Resume Next

On Error GoTo 0

```
Sub OnErrorStatementDemo()  
On Error GoTo ErrorHandler ' Enable error-handling routine.  
Open "TESTFILE" For Output As #1 ' Open file for output.  
Kill "TESTFILE" ' Attempt to delete open  
' file.  
On Error Goto 0 ' Turn off error trapping.  
On Error Resume Next ' Defer error trapping.  
ObjectRef = GetObject("MyWord.Basic") ' Try to start nonexistent  
' object, then test for  
'Check for likely Automation errors.  
If Err.Number = 440 Or Err.Number = 432 Then  
' Tell user what happened. Then clear the Err object.  
Msg = "There was an error attempting to open the Automation object!"  
MsgBox Msg, , "Deferred Error Test"  
Err.Clear ' Clear Err object fields  
End If  
Exit Sub ' Exit to avoid handler.  
ErrorHandler: ' Error-handling routine.  
Select Case Err.Number ' Evaluate error number.
```

RE: Stop the Debug option from coming up

```
Case 55 ' "File already open" error.  
Close #1 ' Close open file.  
Case Else  
' Handle other situations here...  
End Select  
Resume ' Resume execution at same line  
' that caused the error.  
End Sub
```

I have a code which asks the user to input a password before it will continue with the code. If the password is incorrect it puts up a message box which informs the user. At this point, I get the microsoft error message which gives the user the option to debug..... I don't want this to occur.

Is there any way I can stop the microsoft error message from coming up?

My current code looks like:

```
Dim MyStr1 As String, MyStr2 As String  
MyStr2 = ("admin") "This is the password and it is CASE sensitive  
MyStr1 = InputBox("Password Required")  
If MyStr1 = MyStr2 Then  
ActiveSheet.Unprotect Password:=MyStr1  
Else  
MsgBox ("Access Denied")  
End If
```

Rest of code.....

Thanks in advance.
