Hmmm.. sounds like a few issues are brewing in the background. It's up to you at this point, but you're welcome to re-evaluate the issues and re-post with your latest and most complete code along with any descriptions we might need (buttons, etc.).

If the 'worm can' is difficult to describe, feel free to email it to me at [jc\\_.sresearch\\_@xxxxxxxxxxxxxx](mailto:jc_.sresearch_@xxxxxxxxxxxxxx) (remove the underscores "\_") along with the latest errors (and where they occur) and I'll take a look.

I have to sign off for 8-10 hrs, but I'll pick it up after that if you decide to repost.

Thanks for the opportunity and sorry we couldn't nail it down in short order.

Val -

Try changing the line:

If Range ("A" & a) = "" Then

To:

If Range("A" & a) = "" Or Left(Range("A" & a), 5) = "Total" Then

That should generate the correct value for 'b' when there are no blank data rows.

Hi Val –

Your code seems to run fine; I can't  
reproduce the error. On what line does  
the error occur and what are the values of a,  
b, c,
