Maybe I was not clear enough – or maybe I don't understand. I'll try again..

If I put a value less than 1980 in cell C17, I would like a text statement added to cell C21. This added text statement would say "Construction material may contain lead." There may already be a text statement in C21 so the new statement would be added at the end of whatever is already in the cell.

What I have come up with is: =If (C17>1980,C21="Construction material may contain lead.",") I think this would delete whatever is already in C21 and replace the Consturction material...statement. But even if it would work – I don't know where to add the =if statement.

Thanks

Based on value in C15 I want to have a text statement added to cell B21. I would like this to be put at the end of whatever is already in B21 – not just replace the cell content.

Need help with the code – and where it would go.

Thanks
