Hi Nate,

See the code suggested by Michel Pierron  
in the archive thread:

Minimize a form  
<http://tinyurl.com/59fnjt>

Remember to uncomment the first two  
instructions in the UserForm\_Activate  
routine.

Hello, I have a main excel user form that would be better if it were added to  
the task bar, is this possible?

I'm thinking it may involve win API calls? If so could someone point me in  
the right direction.

Thank-yee, Kindly.
