Thanks guys :-)

Problem with the method is that it requires the workbook to be saved!

What I was looking for was a way to determine the size of the workbook AFTER changes has been made to it, but BEFORE saving it???

Anyway to do that?

Charlotte,

Try

```
MyFileSize = FileLen(ThisWorkbook.FullName)
```

which returns the size in bytes

Mike

When you right-click a workbook in windows, and select 'Properties' you can see the size of the workbook in bytes.

Is it possible to get a workbooks size from within the workbook by VBA code?

TIA,
