Averaging dates, doesn't see them all as numbers

Hi all, i've started to average some dates for a user. To make sure the values to be averaged are numbers, i used:

```
=IF(AND(ISNUMBER(I122),ISNUMBER(A122)),I122-A122,"")
```

This is autofilled for about 200 rows. The issue is that now some of the dates are not being calculated by their serial numbers. The answer to the above formula stays blank until i go into either I122 or A122 and reenter the date (or just by editing and hitting enter).

Is there a way to fix this? Excel XP.

TIA,
Kevin M
