Hi Reggie

the reason it did this is that you could of had a comma separated file, which would normally split entries up by using a comma, but as you've got a comma in the number it put the "" around it to indicate not to split it up (did that make any sense)

anyway to fix

select your workbook

choose

edit / replace

type a " in the first box

leave the replace with box blank

click Replace all

(note, it's always a good idea to try things like this out on a copy of the workbook first, just in case)

--

Cheers

JulieD

check out www.hcts.net.au/tipsandtricks.htm

....well i'm working on it anyway
