- 

I am trying to setup a spreadsheet where data will be imported in from another package into a sheet within the spreadsheet on a monthly basis. On another sheet I am trying to setup various formula that will analyse this data automatically. Normally i would use Access but other people within the company do not understand Access. The issue:–

I can't get the count function or any derivative to do what i want. Example of problem below.

A b c d e  
120873 50183368 6 blank REL NMAT PRC SETC  
120873 50183299 4 blank CLSD PRT NMAT PRC  
122873 50185108 3 blank PCNF NMAT PRC SETC  
122873 50178522 3 HUDS002277 TECO PCNF PRT NMAT  
122873 50147658 5 HUDS003115 REL NMAT PRC SETC

I want to total the no of records in column A but deduct those records in column d where a record is found with a hud prefix

—  
Regards vipa  
.
